According to to Aurelio Locsin Audio formats such as WAV, MP3 and WMA store all kinds of sound information, from short clips of applause to displaying the website on long music tracks to saving the latest song. These multimedia files can take up a lot of storage space, especially if high quality is needed. Squeezing these files into small postcode archives makes them more convenient to store and faster to be transmitted online. Click Start and select My Computer. Go to the audio file you want to compress by twice clicking on any discs or folders you want to open. Click the right button on the right file, and then select the Send folder and the compressed folder. The system may ask to link its utility to qIP files. If you don't have a postal utility, answer yes. The lightning file is displayed in the same folder as the original, with the same name, but with a .zip extension. For example, test.doc becomes test.zip. Note that the original file remains, although you can delete it to save space. Download, install and run a standalone mail utility if this method doesn't work because you have a Windows version earlier than XP. Click on the control mark in the Compression Content field. Click the Good button to close the Attributes dialog box and then click the Good button to close the Properties dialog. Examples of such programs include free 7-sip and j-zip, and commercial Vincip. The format of the SIP file reduces the size of the files by squeezing them, saving disk space and reducing the time it takes for the network to be transmitted. It also allows you to combine multiple files into one that is easy to share with others. Here's how to zip and unpack files on Windows 10. First, how to create a file (a compressed folder) and find files or folders that you would like to compress and merge into a file. Windows refers to the cyp file as a compressed folder, so the terms are interchangeable. We'll use the image file group as an example, but you can zip up any type of file. If it's one file or folder you want to compress, click the right button and pop-up menu. Click send and then click the Compressed Folder. You can also select multiple files or folders in Explorer and then follow the same steps above to compress them at the same time. Windows compresses files or folders, and the new qIP file is displayed in the same place as the files you're working with. The SIP file icon looks like a standard Windows folder with lightning on it. Windows then lets you call the qIP file everything you want. Enter the name and then click Enter. RELATED: Everything you need to know about files, how to view the contents of the file and add files, if you want to check the contents of the file, double-click it in File Explorer. The qIP file will open just like a regular folder and you'll see the files inside. You can also copy and paste or drag files into that window, add them to the qIP file. To remove individual files from the qIP, qIP, them from here. Any changes made to the folder will be applied to the qIP file. If you are satisfied, close the file windows and you are installed. You can copy the qIP file to where you want. You can also add more files to your existing file by opening it in Explorer and then dragging the files you want to add to the window. How to extract all files from a compressed folder (file zip) If your compressed folder (file of SIP) contains many files, it is often easiest to extract them simultaneously in a new folder. To do this, find the qip file you'd like to unpack/extract in Explorer. Click the right button on the file and then select Extract All from the pop-up menu. A dialog appears to ask where you want to put the files you're extracting. If you want to change the location, click the View button and then choose the path. When you are done, click Extract. The files will be retrieved at your chosen destination and you will see them in the new window. How to extract one file from a compressed folder (file zip) using Explorer, find a compressed folder (file zip) from which you want to extract the file. Double-click it and it opens like a regular folder. You'll see either a list of files or a group of icons representing compressed files. Find the file you want to retrieve and then drag it from the compressed folder window to another location, such as another folder or desktop. The extracted file is copied to a new location, and it will also remain in the qip file. You can repeat this process as many times as you want. When you're done, just close the compressed folder window. Other ways to zip and unzip there are other ways to zip up and unpack files in Windows using third-party tools such as 7-sip, which is one of our favorites. You can also protect your password and encrypt files by squeezing them for security. RELATED: The best tool for extracting files and compression for Windows Rosa Lin Digital Camera has made photography more accessible to all. Most people have thousands of photo images stored on their computer. While it's easy to store digital photo files, they can take up a lot of space on your hard drive. Also, large file sizes can be difficult to send via email & share over the Internet. Squeezing photos and storing them in an email file is one of the best ways to make them manageable. Open a file of photos in a photo editing or compression program on your computer. Want or compress the photo according to the instructions included in the program. Photo editing programs allow you to change the size of the image by adjusting the pixels, choosing the size you prefer, or reducing the photo by a certain percentage. Some programs have pre-installed settings for web photos or other standard configurations. You don't need to adjust the parameters of the photo, but it is an option. File a photo under a new name so you can easily identify a compressed file of photos. Notice where saved a new photo and close the program. Open the folder where the compressed file is stored. Most Windows computers save photo files in the Image folder by default, creating a stitcher for each date, event, or group of photos. Click the right button on the name of the image or sketch for a new file that needs to be zipped. Select Send and select a Compressed Folder on your computer using the Windows operating system. Select Create an archive on your Macintosh computer. The new lightning file will have the same name as the original, but will appear with a zippered icon folder and a .zip file extension at the end of the file name. Sending one or two files via email doesn't really matter, but if you've emailed a few, and especially dozens or more, the best way to do this is by first putting all the files in the file. Post files are very similar to folders, except that they act as files. This means that you can put all the files you want to send to this special folder, and when it's time to send them, your email client will treat it as a file, meaning that only one file (file qIP) will be sent. Email mail mail files keeps everything neatly organized in one folder. Once the recipient receives your email, they can open the file to see all the files and folders that you store inside. Create a qIP file in Windows 10. Lifewire / Heinz Tschabitscher Find all the files that you want to include in the qIP file. You can do this for your internal hard drives such as C: drive, flash drives, external hard drives, desktop items, documents, images, etc. The steps are the same: Choose files and/or folders that you want to squeeze. They will be allocated to show that they have been selected. Click the right button on one of the selected items. Go to send a zgt: (zipped) folder. If you have multiple files from different locations that you want to include in the same file, make only one to start with. then drag and dip the rest of the files into the file and they will be copied to it. You can throw them at once or several at once. The method above is how you make email files in Windows without using a third-party program. 7-Sip, Pigip and Keka are other ways to make zips in Linux, Windows and macOS. Renaming the qIP file to Windows 10. Lifewire/Heinz Tschabitscher Type name you want to nest to carry. Do something descriptive so that the recipient can understand at first sight what the folder contains. For example, if the qIP file contains a bunch of vacation images, call it something like Vacation Pics 2017, rather than an obscure name like the files you wanted, or the photos. The ability to rename the qIP file will be available as soon as step 1 is completed above, but if you don't this option, click the right button in the file and select Rename. The qIP file, made in the previous stage, is stored in the same folder where you chose the files and folders. Attach the file to the Email. Lifewire / Heinz Tschabitscher Every email client is a little different when it comes to compiling messages and including attachments. No matter what program you're using, find an area where you can add files as attachments, and then select the qIP file you created. For example, this way you would send an email from Outlook.com: Click on a new message. If you're sending a qIP file as a response to an existing message, open that email and click Reply.Click button clip (apps) at the bottom of the message. Click View of this computer. Find the file you created and click on it. Click Open.Click Attach as a copy. If the qIP file is too big to send by email, you can upload it to OneDrive and then send the recipient a link to download it.
