Chapter 1: Introduction and Review 1.1 Origin of Organic Chemistry 1.2 Principles of Atomic Structure 1.3 Bond Formation: Octet Rule 1.4 Lewis Structures 1.5 Multiple Links 1.6 Electronicity And The Polarity of Bond 1.7 Formal Fees 1.8 Ion Structures 1.9 Resonance 1.10 Structural Formula 1.11 Molecular Formula and Empirical Formula 1.12 Acids and Bases Arrhenius 1.13 Bronstead-Lowry Acids and Base 1.14 Lewis Acid and Bases Chapter 2: Structure and Properties of Organic Molecules 2.1 Wave Properties of Electrons in Orbitals 2.2 Molecular Orbitals 2.3 Pi Bonding 2.4 Hybridization and Molecular Form 2.5 Figure Three-dimensional Molecules 2.6 Rules Of Common Hybridization and Bond Geometry 2.7 2.8 Isomerism 2.9 Polarity of Connections and Molecules 2.10 Intermolecular Forces 2.11 Effect of Polarity on Solubilities 2.12 Hydrocarbons 2.13 Organic compounds containing oxygen 2.14 Organic compounds, Nitrogen charchapter 3: Alkanes 3.1 Hydrocarbon Classification 3.2 Molecular Formulas Alkanes 3.3 Alkanes 3.4 Physical Properties Alkanes 3.5 Using and Sources Alkanes 3.6 Alkanes Reaction Alkanes The structure and conformity of Alkanes 3.8 Correspond to the conformation of Bhanan 3.9 Higher Alkanes 3.10 Cycloalkanes 3.11 Cis-trans isomerism in Cycloalkanes 3.12 Cycloalkane Stables; Ring Strain 3.13 Cyclohexane Conformation 3.14 Conformation of monosubstituted cyclohexanes 3.15 Conformation of the disubstituted cyclohexanes 3.16 Cycling molecule The Chapter 4: Study of Chemical Reactions 4.1 Introduction 4.2 Methane Chlorination 4.3 Free-radical chain reaction 4.4 Constant Equilibrium and Free Energy 4.5 Enthalpy and Entropy 4.6 Bond-Dissociation Enthalpies 4.7 Enthalpy Changes in Chlorination 4.8 Kinetics and Speed Equation 4.9 Energy Activation and Temperature Dependence Tariffs 4.10 Transitional States 4.11 Rates Multistep Reactions 4.12 Temperatures Halogenation 4.13 Sampling in Halogenation 4.14 Hammond's Pillar 4.15 Radical Inhibitors 4.16 Jet Intermediate Chapter 5: Stereochemistry 5.1 Introduction 5.2 Chirality 5.3 (R) and (S) Nomenclature of Asymmetrical Carbon Atoms 5.4 Optical Activity 5.5 Biological Discrimination Enantiomers 5.6 Racemic Mixes 5.7 Enantiomeric Excess and Optical Purity 5.8 Chirality Conformatively Mobile Systems 5.9 Chiral Compounds Without Asymmetrical Atoms 5.10 Fisher Predictions 5.11 Diastereomers 5.12 Stereochemistry Molecules With Two or More Asymmetrical Carbons 5.13 Meso Compounds 5.14 Absolute and relative configurations 5.15 Physical properties Diastereomers 5.16 Resolution Enantiomers Chapter 6: Alkyl Halides: Nucleophilic Replacement and Elimination 6.1 Introduction 6.2 Nomenclature Alkyl Halides 6.3 Common Use Alkyl Halides 6.4 Structure Alkyl Halides 6.5 Physical Properties Alkyl Halides 6.6 Preparation Alkyl Halides 6.7 Reaction by Alkyl Halides: Replacement and Elimination 6.8 Second Order of Nucleophilic Replacement: SN2 Generalized reaction SN2 6.10 Factors: SN2: The Power of Nucleophile 6.11 Substrate Reactivity in SN2 Reactions 6.12 Stereochemistry Reaction SN2 6.13 First Order of Nucleophilic Replacement: SN1 Reaction 6.14 Stereochemical reaction SN1 6.15 Permutation in SN1 Reactions 6.16 Reaction Comparison SN1 and SN2 6.17 Elimination of First Order: E1 Reaction 6.18 Positional Orientation of Elimination: Rule of Saytzev 6.19 Elimination of the Second Order: E2 Reaction 6.20 Stereochemistry E2 Reaction 6.21 Comparison of E1 and E2 Elimination Mechanisms: Structure and Synthesis Alkenes 7.1 Introduction 7.2 Alkene's Orbital Description Of Double Bond 7.3 Elements of Unsaturated 7.4 Alkenes 7.5 Cis-Trans Isomers 7.6 Commercial Importance Alkenes 7.7 Stability Alkenes 7.8 Physical Properties Alkenes 7.9 A Synthesis Alkyl Halides 7.10 Alken Synthesis by Alcohol Dehydration 7.11 Alken Synthesis by High-Time Industrial Methods Chapter 8: Reactions Alkenes 8.1 Carbon-Carbon Reactivity Double Bond 8.2 Electrophilic Supplement to Alkenes 8.3 Adding Hydrogen Halides to Alkenes 8.4 Adding Water: Hydration Alkenes 8.5 Hydration Oxymercuration-Demercuration 8.6 Alkoxymercuration-Demercuration 8.7 Alkenes 8.8 Hydroboration Adding Halogens to Alkenes 8.9 Formation of Halogidrin 8.10 Catalytic Hydrogenation Alkenes 8.11 Adding Carbons to Alkenes 8.12 Epoxidation Alkenes 8.13 Acid-Catalyzed Epoxidation 8.14 Syn Dihydroxylation Alkenes 8.15 Oxidative cleavage Alkenes 8.16 Polymerization Alkenes 8.17 Olefin Metathesis Chapter 9: Alkynes 9.1 Introduction 9.2 Alkynes 9.3 Physical Properties Alkynes 9.4 Commercial value Alkynes 9.5 Electronic structure Alkynes 9.6 Acidity Alkin; Formation of Ion's acetylide 9.7 Synthesis of alkynes from acetylides 9.8 Synthesis of alkynes by eliminating reactions 9.9 Adding reactions Alkynes 9.10 Oxidation of Alkin Hour 10: Structure and synthesis of alcohol 10.1 Introduction 10.2 Structure and classification of alcohol 10.3 Alcohol and phenols 4 Physical properties of alcohol 10.5 Commercially important alcohols 10.6 Acidity of alcohol and phenols 10.7 Alcohol synthesis: Introduction and review 10.8 Organthalic reagents for the synthesis of alcohol 10.9 Adding organthalic reagents to carbonyl compounds 10.10 Adverse reactions of organthalic reagents: Reduction Alkyl Halides 10.11 Reduction of carbonyl group: Synthesis 1o and 2o Alcohol 10.12 Tioli (Mercaptans) Chapter 11: Alcohol Reaction 11.1 Oxide condition of alcohol and related functional groups 11.2 Alcohol oxidation 11.3 Additional methods of alcohol oxidation 11.4 Biological oxidation of alcohol 11.5 Alcohol as nucleophils and electrophiles; Formation of tosylates 11.6 Reducing the amount of alcohol 11.7 Alcohol reaction with hydrogyl Reaction of alcohols with phosphorus Halides 11.9 Alcohol reaction with Thionyl Chloride 11.10 Reaction of dehydration of alcohol 11.11 Unique reactions Diols 11.12 Esterification Alcohol 11.13 Esters inorganic acids 11.14 Reaction Alk Infrared spectroscopy and mass spectrometry 12.1 Introduction 12.2 Electromagnetic Spectrum 12.3 Infrared region 12.4 Molecular vibrations 12.5 IR-active and IR-inactive vibrations 12.6 Measurement of IR-Spectrum 12.7 Infrared Spectroscopy of Hydrocarbons 12.2.38 Characteristic absorption of alcohol and amines 12.9 Characteristic absorption of carbonyl compounds 12.10 Characteristic absorption of C-bond bonds 12.11 Simplified summary of IR stretching frequencies 12.12 Reading and interpretation of the IR spectrum (solved problems) 12.13 Introduction to mass spectrometry 12.14 Definition of molecular mass spectrometry formula 12.15 Fragmentation of patterns in Mass Spectrometry Hap 13: Nuclear Magnetic Resonance Spectroscopy 13.1 Introduction 13.2 Theory of Nuclear Magnetic Resonance 13.3 Magnetic Protection with Electrons 13.4 Spectrometer LAM 13.5 Chemical Shift 13.6 Number of Signals 13.7 Peak Area 13.8 Spin Spin Spin 13.9 Complex Splitting 13.10 Stereochemical Non-Covalence Protons 13.11 Time Dependence on NMR Spectroscopy 13.12 Carbon-13 NMR Spectroscopy 13.13 NMR Interpretation of NMR Spectra 13.14 Nuclear Magnetic Resonance Imaging 14: Ethers, Ethers, Ethers, Ethers, Ethers, Ethers, Ethers, Ethers, Ethers 14.1 Introduction 14.2 Physical Properties of Ethers 14.3 Ether Nomenclature 14.4 Spectroscopy Esters 14.5 Synthesis of Williamson Ether 14.6 Synthesis of Estr ethers alkoxymercuration-Demercuration 14.7 Industrial synthesis: Biomolecular condensation of alcohol 14.8 Cleavage of HBr and HI 14.9 Estoxide ester autooxidation 14.10 Thioethers (Sulfides) and Silli Ethers 14.11 Synthesis of epoxy 14.12 Acid-catalytic ring Opening Epoxide 1.4.13 Base-Catalyzed Ring Opening Epoxides 14.14 Orientation Epoxide Ring Discovery 14.15 Reactions of epoxy with Grignard and Organolithium Reagents 14.16 Epoxy Resins: The appearance of the modern glueshaper 15: Conjugated systems, orbital symmetry, and ultraviolet spectroscopy 15.1 Introduction 15.2 Stables Dienes 15.3 Molecular Orbital Pattern Conjugated System 15.4 Allic Cations 15.5 1,2 and 1,4 Adding to The Conned Dienes 15.6 Kinetic vs. Thermodynamic Control in the addition of HBr 15.7 Hellenic radicals 15.8 Molecular Orbits Of the Hellenic System 15.9 Electronic Configurations Allyl Radical, Cation and Anion 15.10 SN2 Moving Reactions by Elicck Khalids and Tos Dilata 15.11 Reaction Dis-Alder 15.1112 Dis-Alder as an example of pericyclic reaction 15.13 Ultraviolet Absorption Spectroscopy Chapter 16: Aromatic Compounds 16.1 Introduction: Discovery of Benzene 16.2 Structure and Properties of Benzene 16.3 Molecular Orbits of Benzene 16.4 Molecular Orbital Pattern of Cyclobutayen 16.5 Aromatic, anti-aromatic and non-aromatic Hekel Rule 16.7 Molecular Orbital Removal of the Hekel Rule 16.8 Aromatic Ions 16.9 Heterocyclic Aromatic Compounds 16.10 Polar Aromatic Hydrocarbons 16.11 Aromatic carbon allotropes 16.12 fused heterocyclic compounds 16.13 Nomenclature benzene derivatives 16.14 Physical properties of Benzene and its derivatives 16.15 Spectroscopy of Aromatic Compounds 17: Reactions of aromatic compounds 17.1 Electrophilic aromatic replacement 17.2 Galogenation of benzene 17.3 Nitration of benzene 17.4 Benzene sulfonation 17.5 Toluene Nitrate: Alkyl Replacement Effect 17.6 Benzene Activation 17.5 Nitration of Benzene 17.6 Ortho, Para-guide Substituents 17.7 Deactivation, Meta-direction Substituents 17.8 Halogen substituents: Deactivation, but Ortho, Para-guide 17.9 Effect of multiple substituents on electrophilic aromatic replacements 17.10 Friedel-Crafts Alkylation 17.11 Friedel-Craft Acylation 17.12 Nuclear Aromatic Replacements 17.13 Aromatic Replacements Using Organetallic Reagents (new section) 17.14 Adding Benzene Reactions Derivative 17.15 Side chain reactions of benzene Derivative 17.16 Reactions phenols Chap 18: Ketones and Aldehydes 18.1 Carbonyl Compounds 18.2 Group Carbonyl Structure 18.3 Ketones and Aldehydes 18.4 Physical Properties of Ketones and Aldehydes 18.5 spectroscopy of ketones and aldehydes 18.6 Industrial value of ketones and aldehydes 18.7 Review of synthesis of ketones and aldehydes 18.8 synthesis of ketones from carboxylic acid 18.9 Synthesis of ketones and aldehydes from Ni 18.10 Synthesis of aldehydes and ketones from acid chlorides and esters 18.11 Reaction of ketones and aldehydes: Nucleophilic supplement 18.12 Wittig reaction 8.13 Hydration of ketones and aldehydes 18.14 Formation of xenogin 18.15 Formation of condensates Imines 18.16 with hydroxylamine and hydrazines 18.18.1617 Formation of acetal 18.18 Use of acetals as protective groups 18.19 Oxidation of aldehydes 18.20 Reductions of ketones and aldehydes 19: Amines 19.1 Introduction 19.2 Item of Aminov 19.3 Structure of The Aminov Amine 19.4 Physical Properties 19.5 Aminov Basics 19.6 Impact on Amine Basicity 19.7 Soli Aminov 19.8 Spectroscopy of Themin 19.9 Aminov Reactions with Ketones and Ketones Aldehyd (Review) 19.10 Aromatic replacement of arilamine and pyridine 19.11 Alkylation of amines by Alkiliom Khalides 19.12 Amine oxide chloride aqulation 19.13 Formation of sulfonamids 19.14 Amins as leaving groups: Elimination of Hofman 19.15 Ocidging of new products: Cope Elimination 19.16 Reactions of amines with nitric acid 19.17 Reactions Arene Diazonium Salt 19.18 Synthesis of amines by reductive Amination 19.19 Synthesis of amines by Acylation-Reduction 19.20 Synthesis limited to primary Amine sChapt ER 20: Carboxylic Acids 20.1 Introduction 20.2 Nods to carboxylic acids 20.3 Structure and physical properties of carboxylic acids 20.4 Acid carboxylic acid 20.5 Salts of carboxylic acids 20.6 Commercial sources Acids 20.7 Spectroscopy of carboxylic acid 20.8 Synthesis of carboxylic acid 20.9 Reactions of carboxylic acids and derivatives: Nucleophilic acyl Replacement 20.10 Acid Condensation with Alcohol: Fisher Ester Ester 20.11 Esterification Use of Diazometan 20.12 Acid Condensation with Amine: Direct Synthesis of Amides 20.13 Reduction of Carboxil 20.14 Alkylation of carboxylic acids to form ketones 20.15 synthesis and use of acid chlorides 21: Carboxylic Acid Derivatives 21.1 Introduction 21.2 Structure and Nods of Acid Derivatives 21.3 Physical properties of derivative carboxylic acid 21.4 Spectroscopy derivative carboxylic acid 21.5 Interconversion of acid derivatives nucleophilic acyl replacement 21.6 Transesterification 21.7 Hydrolysis carilization Boxylic acid derivatives 21.8 Decrease in acid derivatives 21.9 Reaction of acid derivatives with organetallic reagents 21.10 Summary of chemistry of anhydride 21.12 Summary of Chemistry Esters 21.13 Summary of Chemistry Amides 21.14 Summary of Chemistry Nitriles 21.15 Thioesters 21.16 Ethers and Amides from Carbon Acid Parter 22: Cohn Enola and ion Ions 22.3 Alkylation of Ions Enolate 22.4 Formation and alkylation of enamine 22.5 Alpha Gallogenation Ketones 22.6 Acid Bromification: Reaction HV 22.7 Condensation of Aldol Ketonov and Aldehydes 22.8 Dehydration products Aldol 22.9 Crossings Aldol condensate 22.10 Aldol Cyclizations 22.11 Synthesis Planning using Aldol Condensate 22.12 Claisen Condensate Claisen Ester 22.13 Dickman Condensate: Cycling Clausen 22.14 Kleisen's Crossed Condensates 22.15 Synthesis using  $\beta$ -dicarbonyl compounds 22.16 Little Synthesis Ester 22.17 Synthesis of Acetoacetic Ester 22.18 Conjugated Supplementation: Michael Reaction 22.19 Robinson Annulation Chapter 23: Carbohydrates and nucleic acids 23.1 Introduction 23.2 Carbohydrate Classification 23.3 Monosaccharides 23.4 Erythro and Threo Diastereomers 23.5 Epimers 23.6 Cyclical Monosaccharoid Structures 23.7 Anomerosaccharides; Mutarotation 23.8 Reaction of monosaccharides: adverse reactions in the base 23.9 Reduction of monosaccharides 23.10 Oxidation of monosaccharides; Sugar Reduction 23.11 Unredable Sugar: Formation of Glycosides 23.12 Ether and Ester Formation 23.13 Reactions with phenylhydrazine: Osazone Formation 23.14 Chain Reduction; Ruff Degradation 23.15 Chain Lengthening; Kiliani-Fisher Synthesis 23.16 Ring Size Definition; Periodic acid cleavage of sugars 23.17 Disaccharides 23.18 Polysaccharides 23.19 Nucleic acids: Introduction 23.20 Ribonucleosides and Ribonucleotides 23.21 RNA structure and DNA 23.22 Additional Nucleotide functions 24: Amino acids, Peptides and Proteins 24.1 Introduction 24.2 Structure and stereochemie amino acidic 24.3 acid-based properties of amino acids 24.4 Glasses and Electrophoresis 24.5 Amino Acid Synthesis 24.6 Resolution amino acid 24.7 Reactions of amino acids 24.8 Structure and nod to peptides and proteins 24.9 Peptide Structure Definition 24.10 Solution-Phase of peptide synthesis 24.11 Solid-phase peptide Synthesis 24.12 Protein Classification 24.13 Protein Structure Levels 24.14 Protein Denature Culter 25: Lipids 25.1 Introduction 25.2 Wax 25.3 Trigulleicid 25.4 Saponification of Fats and Oils; Soap and Detergent 25.5 Phospholipids 25.6 Steroids 25.7 Prostaglandins 25.8 Terpenes Chapter 26: 26.1 Introduction 26.2 Adding Polymers 26.3 Stereochemist polymers 26.4 Stereochemical polymerization control polymerization; Sieglar-Natta 26.5 Natural and Synthetic Rubbers 26.6 Copolymers two or more monomers 26.7 condensation polymers 26.8 Polymer structure and properties organic chemistry wade 8th edition solutions
