1/28/2016 · The best custom prices, custom price sources, TradeSkillMaster pricing for auto auctions, What are the best settings, how to make your own pricing profile, check the price of the item in World of Warcraft... 6/21/2018 · One of the extremely useful features in TSM is the ability to create custom price sources. Some of my groups rely on custom price sources and in this post I... 11/11/2018 · From the TSM Crafting module, the value of the item is the sum of the material prices (matPrice) of each individual item used to make the recipe. You can change how matPrice is calculated by default in your crafting options according to the default price settings, you can also change the individual matPrice for items in the Materials tab of your Crafting page. 11/20/2015 · Custom TSM price settings for master trading skills in the world of Warcraft. CHECK BELOW These are the settings I use to achieve the gold cap spending only 5 minutes a day playing WoW AH. 11/19/2018 · Today we will focus on a very useful feature to clean up and simplify your pricing operations. Custom price sources are similar to the built-in cost sources in TSM in that you can refer to them by name in your operations, but you can decide what prices they are referring to. Set instructions for TSM 3 In the settings for the custom price source name, type the name in quotes and type the hit. Then in the Custom Price for this Source box in the line below it in the instructions for installing the TSM 4/tsm settings, the custom sources, the variable name enter the thing in quotes and enter. 3/1/2018 · Credits for both user prices and TSM 4 Sniper user are available to Reddit user BilisOnyxia. Set up TSM 4 Sniper If you've already upgraded from TSM 3 to TSM 4, you probably know how good and smooth the process has gone, and it's a surprisingly good and professional thing from the TSM team! 8/29/2016 · Eira has updated her TSM pastebin for the Legion. Tsm. Close. Published. u/Anderru. ... looking a bit customized xmog pricing in the form of my slow server. I want to default after items on the high end price rather than the normal price. Level 2. DownhillYardsale. 1 point three years ago. ... Do you have any custom prices available for... 8/18/2018 Hey, goblins! I was wondering if anyone could help me with setting the price of expulsom in TSM4, so that I can have a craft box to fill with... Our addon is the best of the best when it comes to making gold in World of Warcraft. Everything related to the manufacture of gold is made quickly and easily by our add-on. This includes development, buyback, sales tracking, inventory management, and more. Custom price and cost improvement. Being able to invoke your transaction prices was a popular request in for some time, it will finally be possible in TSM 4.10. As an example, you have a Purchase Operation assigned to a group that provides the maximum... Next we have to go do some custom pricing in another section. Click on the icon in the top left corner of TSM TSM Then click on the Custom Price Sources button To create a name for your custom price source, just like this, darkmooncard without quotes, and then insert this into the user price field: Custom Prices and Value Improvements. Being able to invoke your transaction prices has been a popular request for some time, it will finally be possible in TSM 4.10. As an example, you have a Purchase Operation assigned to a group that provides the maximum... The TSM Desktop Application (TSM app) keeps your addon data up to date and provides access to powerful TSM features such as group notifications, user page items, and more. It also provides features such as accounting exports and automatic backup of TSM settings. undefined cast-iron-stove-doors-sale.html,Cavoodle-pups-for-sale-geelong-victoria.html,Cctv-camera-price-in-pakistan-apple.html,Censure-in-a-sentence-images-of-spring.html,Champion-men-s-octoflex-shoes-on-the-addition, I've noticed that I've never noticed. Ever since TSM4 I haven't really used it as I used to and I can't figure out a way to scan AH and get prices. I have a desktop app open, but the prices don't really match. Also, now that I'm trying to place auctions on some items it posts to the maximum possible outcome. Sorry if this isn't the place to ask for help, but I was hoping that one of you might help me figure it out. Today we will focus on a very useful feature to clean up and simplify your pricing operations. Custom price sources are similar to the built-in cost sources in TSM in that you can refer to them by name in your operations, but you can decide what prices they are referring to. As we reviewed in Part 4 TSM has a long list of built-in sources of value. In addition to these you can make your own sources of value and give them a name so you can use them in your operations. The advantage of this is that it makes it much easier to maintain your business. This is especially useful for groups where you have multiple operations with different stack sizes, but you want to use the same price levels for all transactions. Then you can more easily change the price values for all your transactions at the same time. Custom price sources are also useful for making your operations more understandable, as well as for easily linking the same price in many transactions. You can make custom sources for the value of your materials or other items. How do I make a custom price source? Custom pricing sources are in the main TSM window in settings and user sources, as shown in the screenshot below. As you can see custom sources have two variable name, which is the name that you use to indicate the source of the price and the custom source of prices themselves. You can see that I have a set of custom sources with very different complexity. As an example you can see my custom price for expulsion. I did this to use in the design calculations for any items that use expulsom. Then I could just turn to the user price source in the material cost assessment. When should I do custom pricing sources? You want custom price sources when you have a value that you want to refer to in several different field pricing lines. This may be because you want to multiply the sources of value with a certain factor, you want to have the same price level or you want to refer to the price of some set of specific items. Let's look at some examples from my list of user sources. The source of the cost of Expulsom My Expulsom will calculate the cost of one radiation using the cheapest method. It uses one of the logical functions in TSM that we will take a longer look at in a later post. It uses a mine that will return the lowest part of the set of lines of the divided decimal value. The purpose of the cost source is to be easily able to invoke the cost of one radiation in my other operations and in material estimates in the development of TSM. The line I used referenced the material costs of different skin and Tidespray linen to calculate the lowest price. min(10'dbmarket (i:152576) 2g50s,6'dbmarket (i:152541) i:153050) is a very simple user source of value, which is only estimated at 110% dbhistorical. I used this in my installation to sell old world bars. I had different quantities for each bar, but I would use the same minimum price for all operations, hence the custom source. It will also make it very easy to change the price level in all your transactions at one turn simply by adjusting the user price. Spiritbuy Spiritbuy is not listed above as it is on one of my other TSM profiles. It is a source of value that I use to turn the Spirit of Harmony upside down. It represents the value of one Spirit of Harmony that I can link into pricing settings to sell all the different materials that you can exchange for. Since the materials are traded at different rates, having a custom source is ideal to make auction operations easy to understand. I suggest checking out a group from my Spirit of Harmony post to see how I use custom pricing in my various operations. Part 13: Extended Prices If You Want to Align Gold Solutions consider supporting my Patreon. One of the extremely useful features in TSM is the ability to create custom price sources. Some of my groups rely on custom price sources, and in this post I'll cover when they make sense as well as how they work. What is the source of TSM prices? The price source in TSM is the name variable, which represents a certain predetermined price. This means that you refer to the price source by name, and TSM will search for it for specific items in your groups when it performs a purchase or auction scan (or any other transaction that relies on price sources). The most commonly used sources of prices are usually dbmarket and crafting. DBMarket is the average price of AH goods for the last 14 days. The advantage of price sources Is the huge advantage of price sources is that you don't need to set tight coded gold limits for all your auction operations. Instead of manually calculating the cost of crafting and recalculating when materials prices change, you can simply use 120% crafting for all your crafted items as a minimum price. This is how I can get away with the exact same operation for all my established transmog groups. TSM comes with a lot of pre-defined price sources, and they add more sources to TSM4. There's a lot of nuances as you use them at a higher level, but it doesn't matter to people just starting out. Custom Prices In addition to ready-made sources you can create your own price sources. TSM supports a decent amount of mathematical and logical functions that can be used. This will allow you to create more complex logic for your pricing settings. The main advantage of using a custom price source is that it is very easy to change and it will affect all your operations. This can also make your settings operation look a lot cleaner. One obvious case of use is if you want to use the same pricing settings, but differentiate other settings for a set of operations. If you use custom price sources for mines, normal and maximum prices you can easily change them all the same place. This is what is used in the mining guide I have published, for example. Developed Pricing Settings One of the most famous TSM lines in the game is the sniper string BilisOnyxia. It uses the verification function () to set up a different logic for different price levels. You can use the same logic at the user price to cover a lot of items with one operation. This is especially useful if you want to enter the market without optimizing your TSM settings. This will give you some fast and well-functioning prices that can be used without much thought. I use a price source that looks like a sniper line for my Battle Pet groups, for example. How to customize them in TSM 3 you can find the area for custom prices on the main TSM window when you're chatting/tsm. I'll take you through an example of how to set custom prices for a normal crafting based installation. Choose a name The first thing you need to do is identify the name. The name is something you will use to indicate the user price in the settings. It is usually best to choose a name that is not too long, but rather descriptive. I've posted custom prices for a few of my installations. Names include Spiritbuy priced at Harmony Spirits and minwodherb for the cheapest Draenor grass warlords. An example of the price we're going to do is the normal price for the items created, we'll call it craftednormal. Setting up the price The next thing we need to do is determine what the source of the price is. It can be very complicated or very simple. In this case, we'll use an installation that's a little more advanced than the simplest setting. A normal price is the level at which will be placed when no other items are placed at auction. There are two main problems when choosing this level, you want adequate profit and you want to place it at a level where it is likely to sell. I use a formula that compares 200% crafting, which gives 100% profit and 150%historical. Then he chooses the highest, as normal price. This setting ensures that I get 100% profit. If the historical value for the item is even higher, it will place it at this level. If you want to limit the price to make sure you don't post your items too expensive you can use the same option with mines instead of max. you'll need to add some logic to make sure it doesn't end up below your crafting cost in this

case though. Getting better at creating strings Custom prices can be complicated or as simple as you want. To learn the logic required for lines with different results for different elements, I suggest exploring some logic or programming tutorials. Most programming languages will be used if the statements are of some kind, and this will help you think about how to use ideas. You can also add custom prices to your tooltips so you can see how they change for this item if you change them. This option is under Tooltip options. Good luck! It's a very powerful tool, especially with new sources coming into TSM4. If you want to align your gold decisions consider supporting my Patreon. Patreon. tsm custom price source string
